

Wetlands Committee Report September 12, 2018

The Wetlands Committee is pleased to report that the construction at Twin Pipes (formerly known as Six Pipes) and at the beach intrusion has been completed. Many thanks to the persistence of Lori and David in achieving this result. All water control devices are in place. Going forward the issues for the Island and the Wetlands Committee will be controlling the proper level and current of the water flow throughout the Island now that all water systems are connected. The only outstanding construction issue at Twin Pipes is possible erosion which may solved by rip rap, re-vegetation, or construction.

A short-term matter is a suggested ribbon cutting at Twin Pipes. However, we leave that to the discretion of the Board.

Respectfully submitted,

Richard de Mayo, Chair
